FDOT Description 3:

Project Type: Construct Access Road (Capacity)

Project Narrative:

Project will extend the existing Dowden Road from its current terminus east of Runway 17L/35R to intersect with Heintzelman Boulevard south and west of Runway 17L/35R. Please refer to Figure 7.40. This roadway will initially be constructed as a two lane facility with a length of approximately 1.9 miles. The ultimate configuration is a four lane divided urban roadway. This on-airport transportation facility will connect the Orlando International Airport (OIA) terminal complex to regional Strategic Intermodal System Facilities such as SR 417 and SR 528 and will support the primary flow of passengers and cargo from the eastern portion of the Orlando region. (BF/jlm 06242011)

Project Justification:

Demand for this project is driven by the continued growth and development of the OIA terminal complex, aviation support facilities along Heintzelman Boulevard and the development of the East Airfield Development Area, planned for approximately 6 million square feet of airport support uses. These uses include aircraft manufacturing and maintenance, aircraft hangers, Fixed base Operators, flight training centers, office and air traffic control facilities. This project is identified in the OIA Master Plan, Airport Layout Plan (ALP) and is consistent with the City of Orlando's Growth Management Plan. (BF/jlm 06242011)
